

# WHY AQUACULTURE IS NOT AN ALTERNATIVE TO INDUSTRIAL FISHING

That is not the ethical and ecological alternative that many believe.

# Aquaculture: the "solution" that doesn't solve

Often presented as a sustainable alternative to industrial fishing, aquaculture hides pitfalls that make it anything but a responsible choice.

# **POLLUTION, ANIMAL SUFFERING, EXPLOITATION**

Environmental impact, resource exploitation, and animal living conditions in intensive aquatic organism farming are just some of the problems with this practice.

# THE SOCIO-ECONOMIC IMPACT AND ANIMAL SUFFERING

Aquaculture not only damages ecosystems but also threatens coastal communities and dooms animals to a life of suffering.

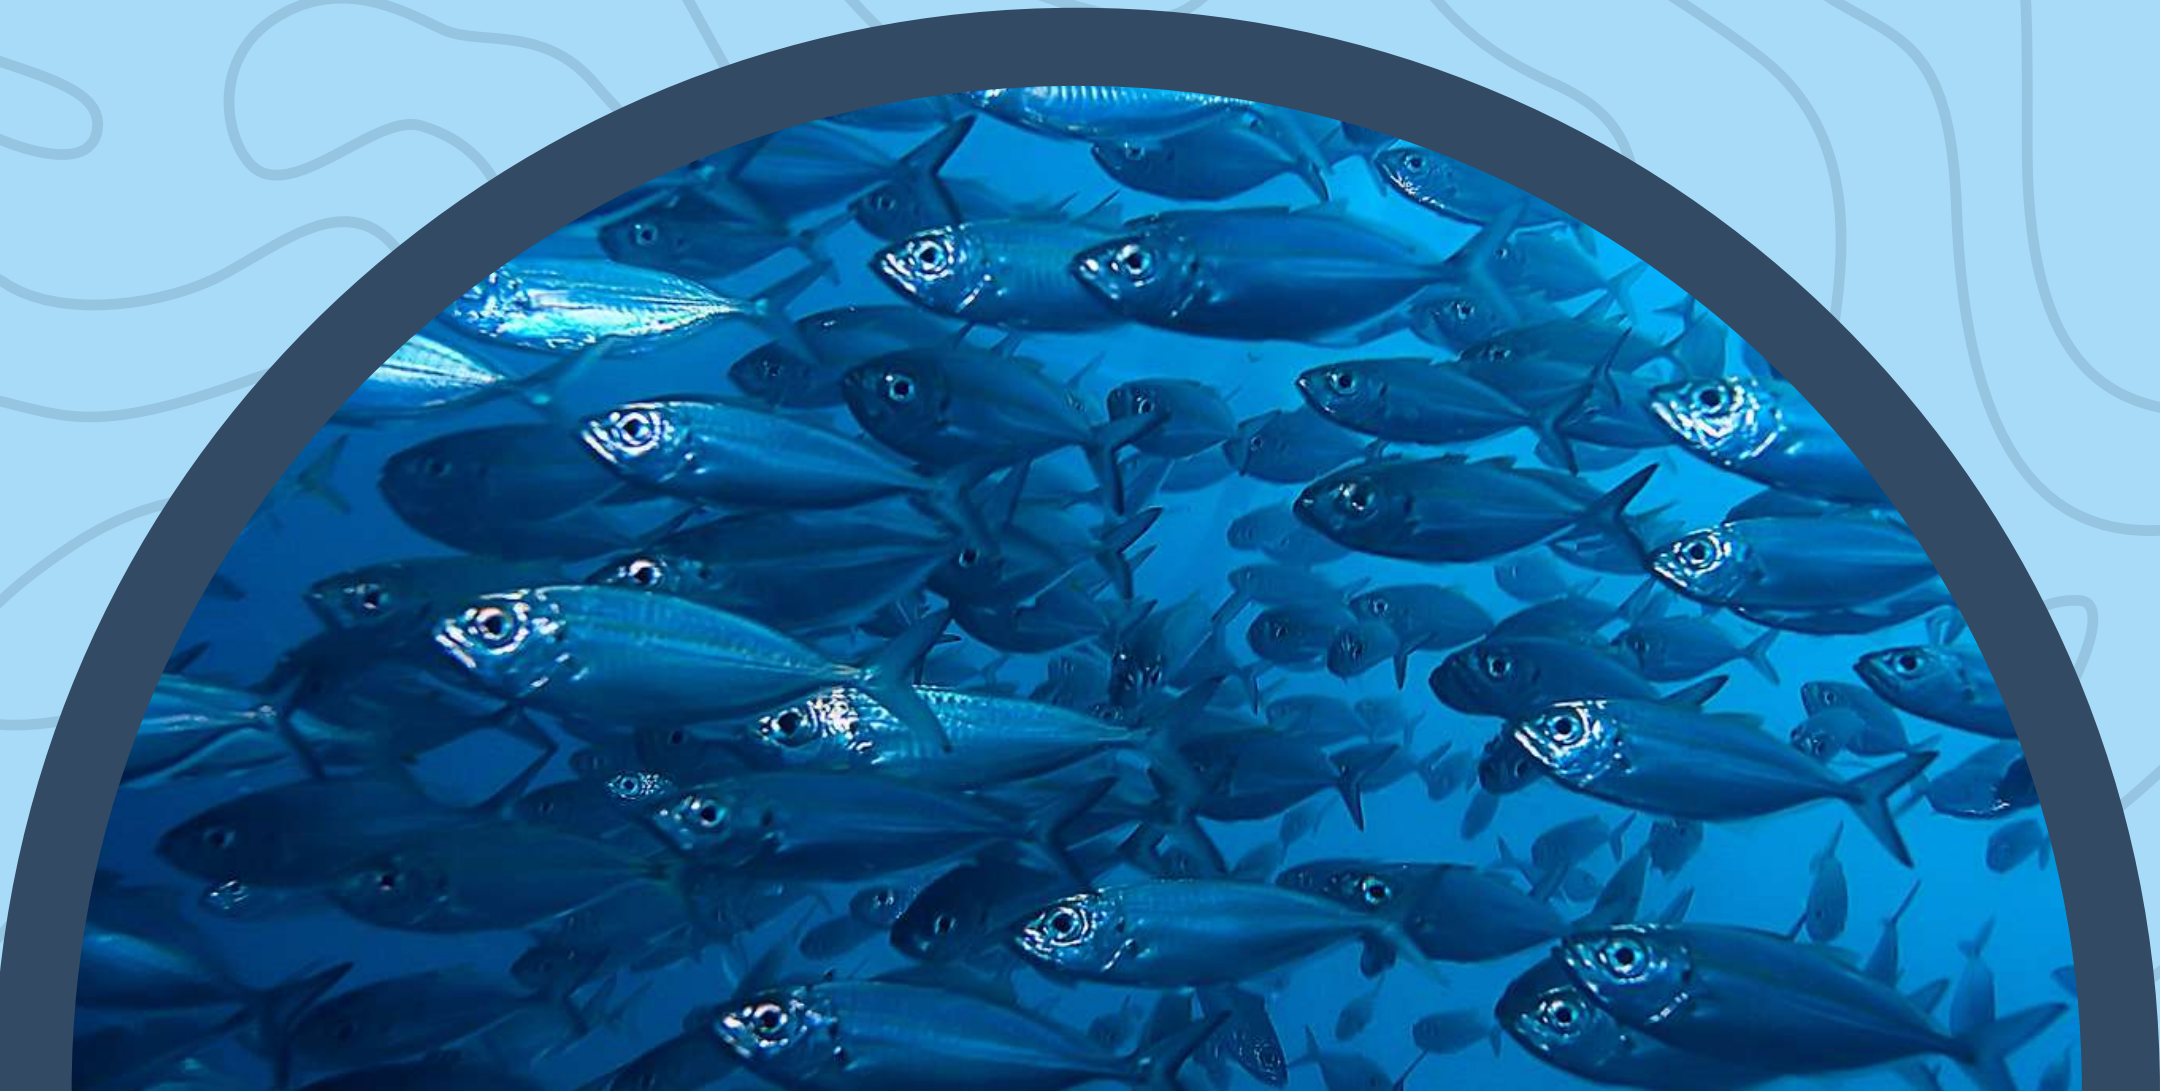

# BIODIVERSITY IMPACT

The concentration of harmful substances in the surrounding waters seriously threatens aquatic ecosystems. Furthermore, the practice of using wild fish to produce feed intensifies the harmful cycle of overfishing, further contributing to the decline of global fish stocks.

**Choosing a vegan lifestyle is the most ethical and sustainable choice for the planet, for animals, and for our future.**
